(54) OIL SUPPLYING SYSTEM FOR FLUID COUPLING

(57) Abstract:

PURPOSE: To supply adequately cooled oil at re-start by installing a means of air breathing on an oil cooler, connecting a part of piping on the discharge side of an auxiliary oil pump with the oil cooler and other part bypassing the oil cooler.

CONSTITUTION: An oil supplying system is equipped with an oil tank used concurrently as a housing 10, a main oil pump 14, an auxiliary oil pump 18, an oil cooler 22, an air breather pipe 23, an operating oil channel 24 and a lubricating oil channel 25. A part of piping 20 on the discharge side of an auxiliary oil pump 18, 20-1, is connected with an oil cooler 22 while other part is connected with the lubricating oil channel 24 bypassing the oil cooler 22. This enables supplying a sufficient amount of oil, as lubricating oil, to clear the starting interlock.
